Typology

Single-Family Detached

Facts

Unit Plan Size: 1,790 sq. ft.

Lot Configuration: Front Loaded

Plotting: Conventional

KB Home ProjeKt®, designed for the 2016 Greenbuild Conference, is a brainstrom of KB Homes, Builder Magazine, KTGY Architecture + Planning and numerous product manufacturers that establishes a new concept for a compact home that utilizes less land, offers an adaptable floor plan for families' changing needs and is built with the most innovative technology on the market today. The homes open concept draws on the relationship of interior exterior space. The entry leads to an open concept kitchen/dining/living space that features an openable wall connecting the outdoor living deck with the main entertaining space. Generating flexible space is another focus of the design, by incorporating moveable wall partitions one space can function as an enlarged entertaining space off the living room, office space or a sleeping area. The emphasis on livability, flexibility and sustainability make this home a catalyst for discussion on the future of homebuilding.
